Periodontal Maintenance in the Periodontal Specialist's Office

We continually hear from our patients that they are now enjoying an enhanced quality of life with the periodontal surgical therapy that they underwent. While short term results are nice, there is no greater importance to achieving long-term health than follow-up care (or periodontal maintenance as we call it) and the patient plays a key role. We recommend that you visit your dentist at recommended intervals and return to our office once a year for periodontal/peri-implant maintenance. **Periodontal/peri-implant maintenance** is started after completion of active periodontal and implant therapy and continues at varying intervals for the life of the dentition or its implant replacements. There are two reasons for you to have regular hygiene visits in your dentist's office and also come to our office annually for periodontal/peri-implant maintenance:

Protect Your Health

The gums and bone (i.e. periodontium) that support your teeth and/or dental implants are always subject to disease. Poor compliance with professionally recommended implant maintenance-- including not brushing or flossing regularly or not having regular dental check-ups and an annual visit to the periodontist--have led to periodontal and peri-implant diseases, which can cause bone destruction and eventually the loss of the tooth or implant. Periodontal and peri-implant diseases are inflammatory processes. As periodontists, we are dentistry's experts in managing inflammation and diagnosing and treating periodontal disease and peri-implant diseases. We specialize in the prevention, diagnosis, and treatment of periodontal disease, and in the placement of dental implants. We work closely with you and your dentist to ensure the long-term success of your dental implant and periodontal treatment.

Protect Your Investment

Periodontal and/or dental implant treatment in a particular area of the mouth is often done only once in a patient's lifetime, because the treatment has a very high success rate. However, without proper periodontal or peri-implant maintenance, including regular check-ups in your dentist's office and a once-a-year visit to the periodontist, the periodontium and/or implants can be at risk. In some cases, periodontal disease progresses to the point that necessitates removal of the tooth or dental implant, disease treatment, and replacement of a dental implant. To protect your investment, we recommend that you return to our office for an annual dental implant maintenance visit. The costs of the maintenance visit and your regular dental visits are very small fraction of the cost of treating periodontal disease and/or replacing an implant. Think of these visits as the most cost-effective, preventative strategy to protect your oral and periodontal health for a lifetime.

Your annual visit to our office should be in addition to your regular hygiene appointments with your general dentist. We work in collaboration with your dentist, not as a substitute, and together we will maintain your oral health.

Please call our office to schedule your annual periodontal maintenance visit: Park Ridge: (847) 698-1180
Oakbrook Terrace: (630) 3930
